

AMOS Project: TaskOrbit

Team 4

Product Owners: Carl Mosler, Christoph Huy

Scrum-Master: Rene Jokiel

Developers: Qiblatain Fatima, Asad Raza, Vineesh Koppay, Abdul
Moez, Shikhar Thakur, Dhruvin Vekariya, Endri Shameti

TaskOrbit

Problem Definition

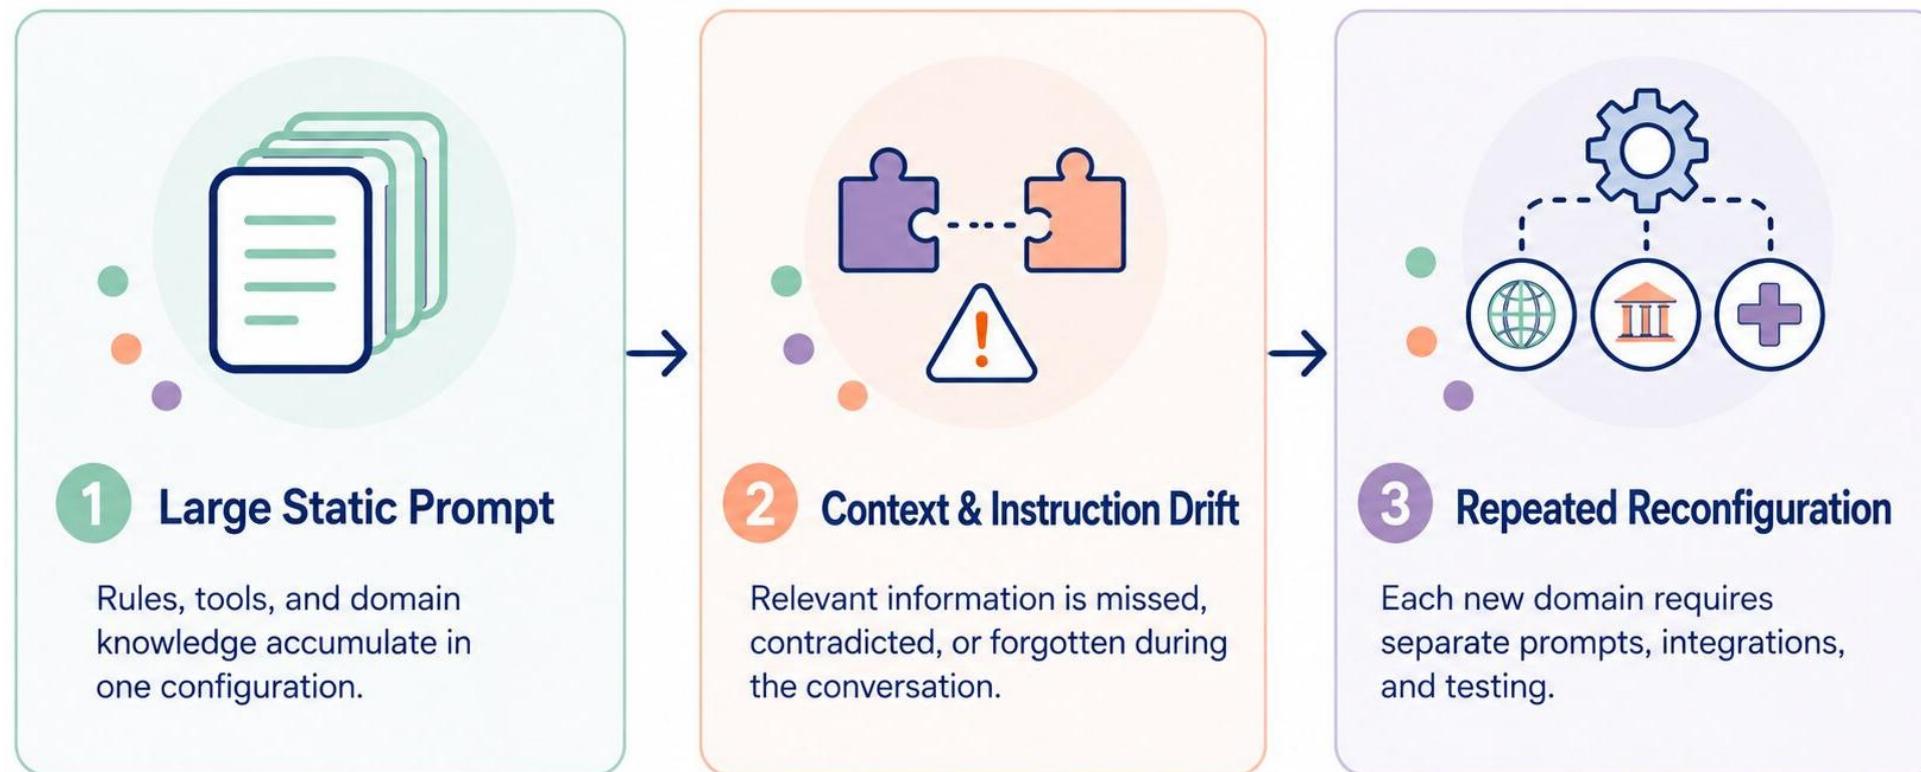

Figure: Key limitations of traditional conversational agent configurations

TaskOrbit

Project Vision

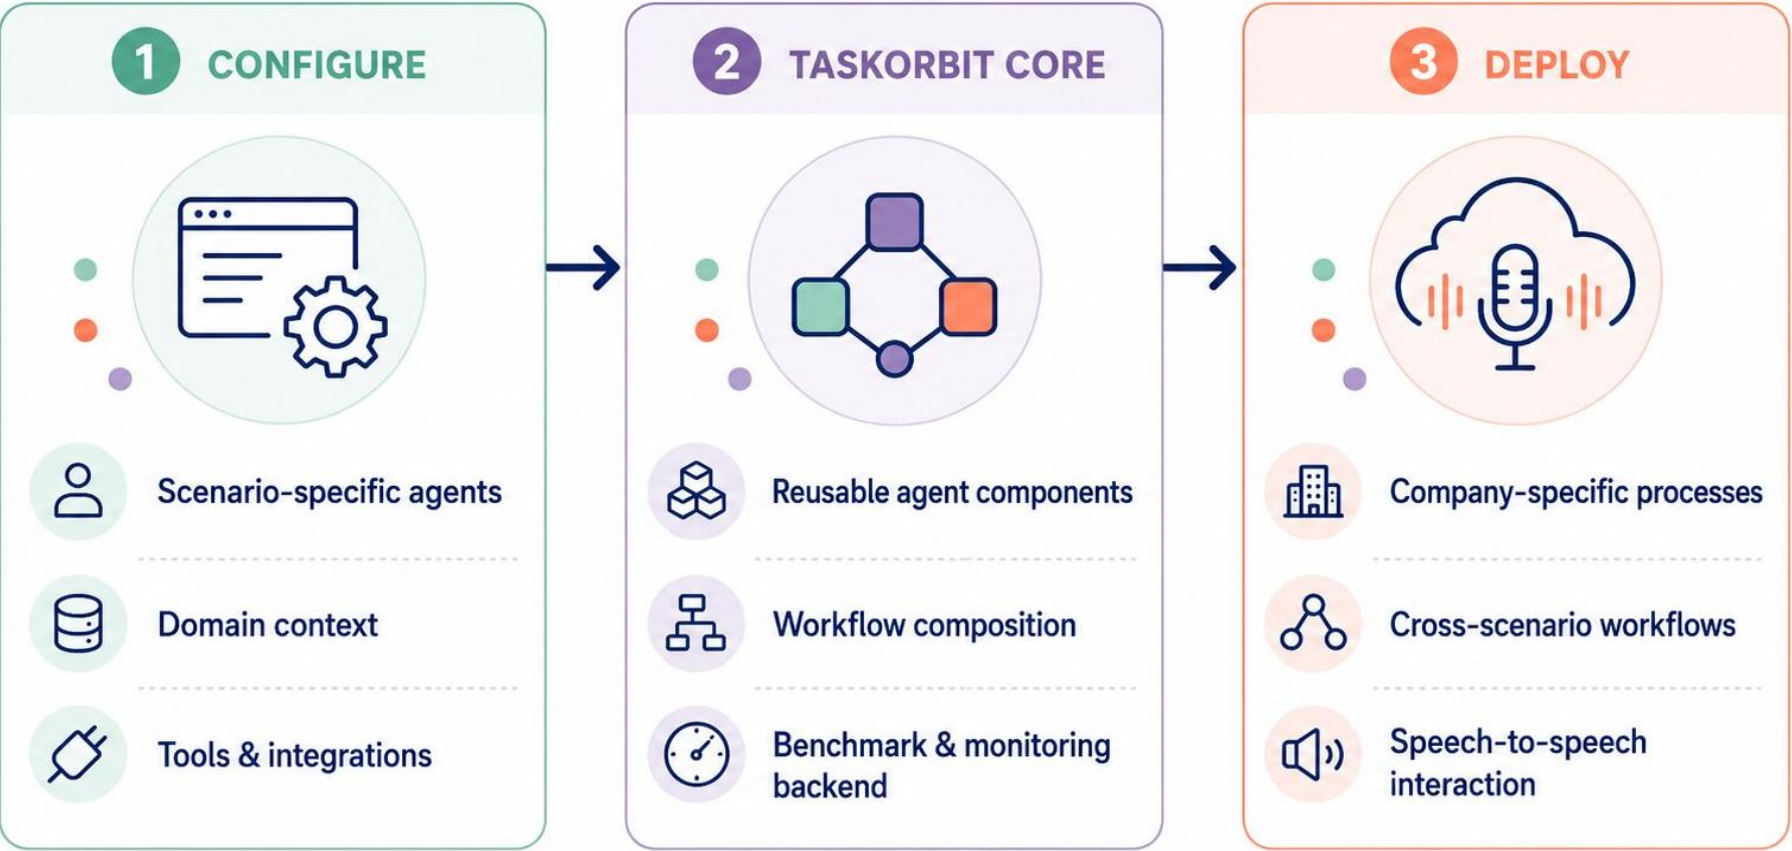

Figure: TaskOrbit's configurable workflow from scenario-specific agent setup to company-specific deployment

TaskOrbit

Techstack & System Architecture

Modular Architecture

- Provider-based STT, LLM and TTS components
- Config-driven parsing and routing

Extensible Integrations

- Interchangeable third-party services
- Support for custom providers and workflows
- Self-hosted open-source model inference

Cloud-Native Backend

- Web-based configuration interface
- Scalable deployment on GCP
- Benchmarking and monitoring support

Technology Stack

- React, TypeScript, Vite
- Python, FastAPI
- LiveKit, Deepgram, ElevenLabs, OpenRouter
- Gemma 4, Qwen 3.6, ChatGPT 4o, Gemini 2.5

CORE PIPELINE
